Chromium amino acid chelate + Ractopamine Hydrochloride (CrAC) Comprehensive Muscle Developer for Market Hogs

TARGETTED MUSCLE BUILDERS Synergy in Action

CrAC*** - the first targeted product in the market specifically directed to musculature, combining the proven muscle growth enhancing and energy proportioning activities of:

Chromium amino acid chelate* - the most bioavailable true chromium chelate form, proven to increase cellular level absorption of glucose and metabolites, supporting enhanced muscle development and growth

Ractopamine hydrochloride - dedicated muscle developing compound for animals, determined in trials to provide significant musculature enhancement, lean dressing percentage increase and feed to gain improvement

CrAC*** applies the highly synergistic activity of the two compounds, exerting an impact potentially greater than what the two can individually achieve

CrAC*** is non steroidal, causes no untoward side effects nor creates residuals harmful to man and animals

CrAC*** is currently the most cost-effective supplement in eliciting visible, measurable muscle and lean gain enhancement for premium liveweight priced hogs and improved bottom line costs/gain

* Chromium amino acid chelate is a registered product of
NUTREX/AGRIaccess, USA

CONTENTS/kg

Chromium amino acid chelate equivalent to 400mg bioavailable chromium,
ractopamine hydrochloride 10 gms; Carrier and free flow q.s.

INDICATION

For use in swine finishing rations as a muscle and lean gain enhancer

RECOMMENDED USE AND DOSAGE

1/2 to 1 kg/ton of growing-finishing feed

PACKAGING

10 kg box

A Performance Enhancing Nutritional Product of:

AGRIaccess

Bothell WA 98021 USA
