

# BV 1

## Professional Grade Canine Food ADULT DOGS

**Clinically formulated** professional grade rations specifically designed for **carnivores** (dogs and cats) raised in the hot and humid tropics, using:

**HIGH PROTEIN BIOLOGIC VALUE (>65%),** low heat processed **animal protein meals,** with minimal protein denaturation/deamination, minimized protein excretion and maximized protein utilization/accretion. Resulting to greatly reduced Nitrogen excretion in the kidneys (by as much as 80%), **effectively avoiding kidney stones and related kidney conditions common in Low Protein Biologic Value dry dog foods,** and

Extruder gelatinized and enzymatically supported **Ground rice,**

**For a highly digestible, highly bioavailable, and totally LOW HEAT INCREMENT VALUE** (less than 20% of Metabolizable Energy or ME) daily food, leading to **lower body heat generation,** a critical feature in helping keep dogs comfortable in the hot, humid tropics.

Satisfying the pet's daily energy requirement in lesser intake volume, the resulting feces are visibly smaller and drier, with less of the typical dog fecal odors.

**SUPPLEMENTED WITH 100% CHELATED MINERALS,** assuring over 92% bioavailability of minerals, supporting enhanced growth, immunity, reproduction, healthy skin and haircoat, and general well being.

**HIGH PRESSURE DRY EXTRUDER PROCESS. No external heat applied,** preserving natural protein and vitamin bioavailability, yet effectively kills pathogenic microorganisms, and enhancing preservation/ extending shelf life

**No corn or soybean added.**

### INGREDIENTS

Extruded rice, low heat processed beef meal, low heat processed porcine meal, wheat flour, mineral amino acid chelates pack, vitamins pack, enzymes pack.

Professional Nutritional Products Designed for the Tropics:
